

Configuring iOS Devices (iPhone, iPad, Etc.) for IMAP on Exchange 2010

Updated 6/11/2013

The following instruction set will configure your iOS device to connect to your Exchange mailbox via the IMAP Protocol. IMAP connections are for E-mail only. Calendar and contact synchronization is not available in this configuration.

1. On your iOS device, click Settings, then “Mail, Contacts, Calendars”

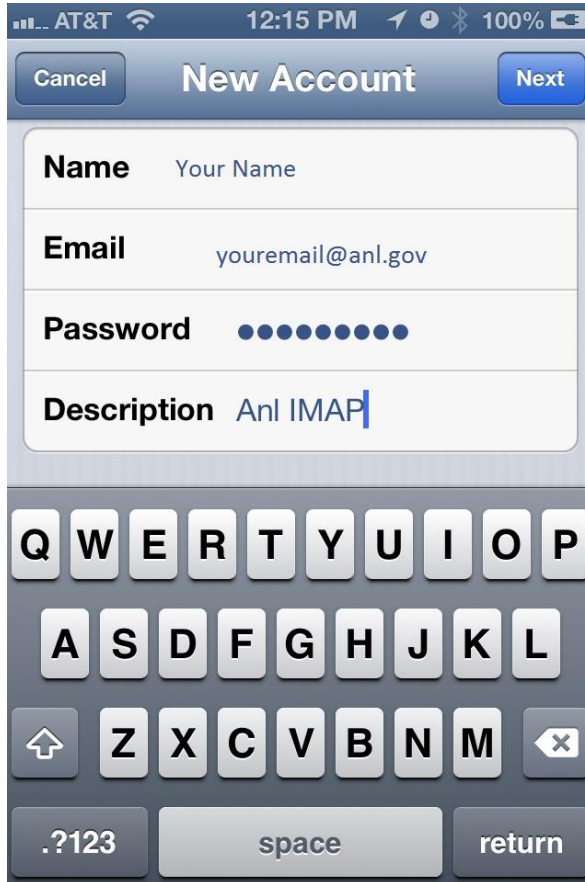

2. Choose "Other" . If you already have a mailbox set up, choose "Add Account" and then "Other".

3. Choose "Add Mail Account"

4. Enter your Name, email address, and ANL domain password, and Description

5. Choose IMAP, Then enter the incoming and outgoing server information provided below

The screenshot shows the 'New Account' setup screen on an iPhone. The status bar at the top displays 'AT&T', signal strength, Wi-Fi, time '12:12 PM', location, Bluetooth, and 100% battery. The screen is divided into two main sections for 'Incoming Mail Server' and 'Outgoing Mail Server'. Each section has three input fields: 'Host Name', 'User Name', and 'Password'. The Incoming Mail Server fields contain 'outlook.office365.com', 'user@anl.gov', and a masked password. The Outgoing Mail Server fields contain 'smtp.office365.com', 'user@anl.gov', and a masked password. Below these sections is a keyboard with a QWERTY layout and function keys like '?123', 'space', and 'return'. The title 'New Account' is centered at the top of the form area, with 'Cancel' and 'Next' buttons on either side.
